

LegalEase

Phase 1: Brainstorming and Ideation

AI-Powered Legal Document Drafting and Export Platform

Project Phase Document

This PDF consolidates the prepared project materials for this phase.

README

Phase 1 — Brainstorming and Ideation

1.1 Problem Statement

Creating a first draft of a legal document can require repetitive collection of party details, dates, clauses, terms, formatting, and document structure. Users who are unfamiliar with legal-document structure may also find it difficult to convert plain-language requirements into a consistent draft.

1.2 Proposed Solution

LegalEase is an AI-assisted drafting platform that accepts structured user inputs and uses Google Gemini to generate a structured legal-document draft. The generated content can be previewed and exported as TXT, DOCX, or PDF.

1.3 Target Users

- Students learning legal-tech concepts
- Individuals preparing an initial document draft
- Small businesses preparing routine document drafts
- Developers demonstrating generative-AI integration
- Legal professionals who want a first-draft assistant

1.4 Core Features

1. Document type selection
2. Parties and participant details
3. Effective date
4. Terms and conditions
5. Additional instructions
6. AI-powered generation
7. Generated-document preview
8. Optional logo upload
9. TXT export
10. DOCX export
11. PDF export
12. API-based architecture

1.5 Innovation

The project combines:

- Generative AI
- Legal-document structure
- FastAPI services
- Streamlit UI
- Multi-format document generation

1.6 Goals

- Reduce repetitive drafting work
- Produce consistently structured first drafts
- Make AI-assisted drafting accessible through a simple UI
- Demonstrate an end-to-end GenAI application
- Provide downloadable document outputs

1.7 Constraints

- AI output can contain mistakes
- Legal requirements differ by jurisdiction and document type
- API availability and model behavior can change
- Generated drafts require human review
- Sensitive personal/legal information should be handled carefully

1.8 Expected Outcome

A working web application where a user enters document information, requests generation, reviews the draft, and exports it in a selected format.

01 Idea Canvas

LegalEase Idea Canvas

Area	Decision
Problem	Manual/repetitive first-draft preparation
Product	AI-assisted legal document drafting
AI	Google Gemini
Frontend	Streamlit
Backend	FastAPI
Input	Document details, parties, dates, terms
Output	Draft + TXT/DOCX/PDF
Primary value	Faster structured first drafts
Human role	Review and validate generated content
Main risk	Incorrect or unsuitable AI-generated text

Success Criteria

- Application launches successfully.
- User can submit a document request.
- Backend validates the request.
- Gemini generates a structured draft.
- Draft is displayed in the frontend.
- Export buttons generate valid files.
- Errors are presented clearly.
