

LegalEase

Phase 8: Project Demonstration

AI-Powered Legal Document Drafting and Export Platform

Project Phase Document

This PDF consolidates the prepared project materials for this phase.

README

Phase 8 — Project Demonstration

8.1 Demonstration Objective

Demonstrate the complete LegalEase workflow from input to AI generation to document export.

8.2 Recommended 7–10 Minute Demo

Part 1 — Introduction

Explain:

- Project name
- Problem
- Solution
- Target users

Part 2 — Technology

Show:

- Streamlit
- FastAPI
- Gemini
- Python
- DOCX/PDF/TXT exporters

Part 3 — Live Input

Enter:

- Document type: Service Agreement
- Party A: Example Company
- Party B: Example Client
- Effective date: current/project date
- Terms: payment, services, responsibilities
- Additional instructions: clear headings

Part 4 — AI Generation

Click Generate and explain:

1. UI sends data to backend.
2. FastAPI validates the request.
3. AI layer constructs the prompt.
4. Gemini returns the draft.
5. Frontend displays the response.

Part 5 — Export

Demonstrate:

- TXT
- DOCX
- PDF

Open at least one exported file.

Part 6 — Testing

Show:

- /docs
- /health
- Test suite
- One validation failure

Part 7 — Conclusion

Explain achieved objectives and future improvements.

02 Presentation Outline

Presentation / PPT Outline

Slide 1 — Title

LegalEase

AI-Powered Legal Document Drafting and Export Platform

Slide 2 — Problem

Manual first-draft preparation can be repetitive and time-consuming.

Slide 3 — Proposed Solution

AI-assisted structured document drafting.

Slide 4 — Objectives

- Generate drafts
- Preview
- Export
- Demonstrate GenAI integration

Slide 5 — Architecture

Streamlit → FastAPI → Gemini → Draft → Exporters

Slide 6 — Technology Stack

Python, Streamlit, FastAPI, Gemini, Pydantic, python-docx, ReportLab.

Slide 7 — Workflow

Input → Validate → Prompt → Generate → Preview → Export.

Slide 8 — UI Demo

Show the input form and generated document.

Slide 9 — Export Demo

Show TXT, DOCX, and PDF.

Slide 10 — Testing

Show test cases and API documentation.

Slide 11 — Limitations

AI output requires review and may need jurisdiction-specific validation.

Slide 12 — Future Scope

Authentication, history, templates, database, collaboration, multilingual support.

Slide 13 — Conclusion

LegalEase demonstrates a complete AI-powered document-generation workflow.

03 Demo Script

Ready-to-Speak Demo Script

Good morning everyone. Our project is **LegalEase**, an AI-powered legal document drafting and export platform.

The main idea is to help users create a structured first draft from simple information such as document type, parties, effective date, and terms.

The frontend is developed using Streamlit. The backend uses FastAPI. Google Gemini is used for generative AI, while Python libraries generate TXT, DOCX, and PDF files.

First, I enter the document information. When I click Generate, the request is validated by the FastAPI backend. The AI module then builds a controlled prompt and sends it to Gemini. The generated draft is returned to the application and displayed for review.

Now I can export the result as TXT, DOCX, or PDF.

We also test invalid inputs and API failures so that the application does not simply crash.

LegalEase is intended as an AI-assisted drafting tool. Generated documents should be reviewed appropriately before real-world legal use.

Thank you.
